The reduced equilibrium vapor densities ($\rho_V^* = \rho_V \sigma_V^3$) for the system with $\varepsilon_{22}/\varepsilon_{11}$=0.75, $\varepsilon_{33}/\varepsilon_{11}$=0.50, σ_{22}/σ_{11}=0.75, σ_{33}/σ_{11}=0.50 (system 1) were incorrectly reported in table 2, because of an error in the conversion factor. The correct values are reproduced below:

x_1	x_2	$\rho_L^* = \rho_L \sigma_L^3$	y_1	y_2	$\rho_V^* = \rho_V \sigma_V^3$
